```
# observation 1: Just write your observations at the bottom of the script like  
# this. If you want to "reflow" a script so that each line is the proper length  
# without having to many enter the line breaks, just highlight the comment, and  
# click *Code > Reflow Comment*. You'll get nice, equally-size lines, like  
# these.
```

```
# observation 2: ...
